

## Specifications for Calculators Approved For Use on Proctored LOMA Exams

Calculators are not necessary to pass any LOMA exam. However, students can use a basic 4-function calculator with no special features or functions if they wish.

Before administering any LOMA exam, **examination proctors MUST inspect all calculators** in the testing room to ensure they meet LOMA's specifications. Company proctors may wish to maintain a supply of approved 4-function calculators for student use while in the exam room.

- Basic functions (+ / - / × / ÷)
- Square root function ( $\sqrt{\quad}$ ) is acceptable
- Solar or battery powered

**Students MAY NOT use cell phones or internet-accessible devices as calculators.** Examples of acceptable calculators are pictured below.
